STATEMENT OF REASONS FOR ALLOWANCE

The previous rejections under 35 U.S.C. 112 are considered to be obviated by applicant's amendment and remarks.

Claims 55-58, previously too indefinite and inaccurate for accurate comparison to the prior art, are now in acceptable form. The examiner considers these claims to be unobvious over the prior art of record, but not for exactly the same reasons as advanced by applicant. The examiner agrees, in general, with applicant's statement in his remarks with the amendment (Paper No. 17), page 9, lines 3-7; however, applicant's comment (supra, lines 8-11) is considered misleading in its implication that the cited references do not process calling terminal ANI signals. As pointed out in the Paper No. 10, at page 6 thereof, Riskin clearly does process calling terminal ANI, and that well known alternative would have been recognized with respect to the DeFrancesco et al. patent. However, neither of the references is seen to teach applicant's claimed combination of "analysis structure" which [processes]...caller data signals...developed by [the] terminals to compose and store [the] terminal digital data indicative of the calling number and [the] data...developed by [the] terminals in a specific format;", and "control structure for controlling [the] analysis structure in accordance with [the] terminal digital data indicative of the calling number" (emphasis added). This is understood to relate to the composition and storing of data on plural terminals in the context of the received ANI of each caller's ANI signals, as described in the text at pages 15-18, and especially in the respective paragraphs bridging pages 17-18 and 19-20. The examiner concedes that this particular arrangement is not taught by the references of record.
